

[Title]			[Instructor]		
Field Research for Environmental and Social System Science			Intensive		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTK701	2	Environmental and Social System Science Course		/	English/ Japanese
[Outline and purpose]					
This lecture is aimed to train practical ability of broad view and problem solving by participating and practicing students in research and development cooperated with outside organizations such as enterprises and government.					
[Objectives]					
By participating students and conducting exercises in cooperation with outside organizations such as corporations and government agencies, students can acquire practical skills in broad view and problem solving by participating in exercises.					
[Requirements]					
To understand obligation of confidentiality of information that students learned in research and development and to understand ethics concerning development.					
[Evaluation]					
Based on the student's research presentation, the supervisor in charge will evaluate the grade.					
[Textbooks]					
Instructed as necessary					
[References]					
Instructed as necessary					
[Schedule]					
<p>Intensive lecture form</p> <p>The actual form shall be any of the following related to the teacher in charge.</p> <p>1) Collaborative research conducted at the Graduate School General Research Division and outside organization</p> <p>2) Research and development in collaboration with other organizations outside the university</p> <p>We aim to participate in exercises for 60 hours and be able to exceed the grade level.</p> <p>At the end we hold a recital and the students announce the results. The instructor in charge will evaluate the grade based on the contents of the presentation.</p>					

[Title]			[Instructor]		
Advanced Exercises for Environmental and Social System Science I			Each academic supervisor		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTK750	2	Environmental and Social System Science Course		Tue./IV	English/ Japanese
[Outline and purpose]					
This lecture is a seminar exercise that conducts research on basic literature in fields directly related to research themes. Through broad learning of fundamental knowledge on research themes and ongoing progress report and discussion to the supervising group, the purpose of this lecture is to let students acquire a viewpoint of significance, role, target setting, methodology to advance research.					
[Objectives]					
To establish a viewpoint in advancing research such as research significance, role, goal setting, methodology.					
[Requirements]					
To acquire the research ability to collect, understand and evaluate academic papers in order to know what level of cutting-edge is at home and abroad in the research theme you are about to work on.					
[Evaluation]					
100%: Content of research/investigation and discussion					
[Textbooks]					
Research papers related to research themes will be introduced occasionally.					
[References]					
Research papers related to research themes will be introduced occasionally.					
[Schedule]					
In order to deepen knowledge of the research theme and foster students' efforts, strict guidance will be conducted in seminar form.					

[Title]			[Instructor]		
Advanced Exercises for Environmental and Social System Science II			Each academic supervisor		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTK751	2	Environmental and Social System Science Course		/	English/ Japanese
[Outline and purpose]					
This is a seminar exercise that conducts research and research on the latest literature in fields directly related to the research theme. Students will report and discuss ongoing research survey with the supervisor group, conduct research and examine the results.					
[Objectives]					
To understand the state-of-the-art level of research topics to be undertaken, and acquire advanced research capabilities such as how to conduct new discoveries and technological development beyond that level in any way.					
[Requirements]					
To acquire the research ability to collect, understand and evaluate academic papers in order to know what level of cutting-edge is at home and abroad in the research theme you are about to work on.					
[Evaluation]					
100%: Content of research/investigation and discussion					
[Textbooks]					
Research papers related to research themes will be introduced occasionally.					
[References]					
Research papers related to research themes will be introduced occasionally.					
[Schedule]					
In order to deepen knowledge of the research theme and foster students' efforts, strict guidance are conducted in seminar form.					

[Title]			[Instructor]		
Advanced Course of Disaster Mitigation and Damage Reduction			Takashi Miyamoto / Kazuaki Ohtsuki		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTL701	2	Environmental and Social System Science Course	2nd Semester	Fri./III	Japanese
[Outline and purpose]					
This lecture aims to study the management method of disaster prevention and mitigation, mainly targeting earthquake and flood disasters. The lecture explains disasters fact and disaster prevention and mitigation strategies in the viewpoint of watershed management and regional management techniques.					
[Objectives]					
<ul style="list-style-type: none"> <li>• Student can understand the viewpoint of disaster prevention and mitigation based on disaster facts.</li> <li>• Student can apply watershed management viewpoint to practical business and research.</li> <li>• Student can apply regional management techniques to practical business and research.</li> <li>• Student can obtain basic knowledge about disaster prevention and mitigation strategies.</li> </ul>					
[Requirements]					
<p>Students are recommended to obtain basic knowledge of “disaster management and engineering, comprehensive river engineering and information technology.</p> <p>Student can understand the content of lecture by reading relating technical report and book, too.</p>					
[Evaluation]					
<ul style="list-style-type: none"> <li>• Report : 50%</li> <li>• Presentation and discussion : 50%</li> </ul>					
[Textbooks]					
Not specified					
[References]					
<ul style="list-style-type: none"> <li>• 末次忠司：水害から治水を考える、技報堂出版（ISBN：978-4-7655-1838-3）（in Japanese）</li> </ul>					
[Schedule]					
<p>The schedule of this course is as follows;</p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Legal systems for disaster management</li> <li>• Facts of disasters</li> <li>• Watershed management</li> <li>• Application of physics and informatics for disaster damage estimation</li> </ul> <p>The lecture will be given by short-term intensive course after the arrangement of the schedule with the students.</p>					

[Title]			[Instructor]		
Urban and Regional Designing			Nobuyuki Ishii / Shinichi Muto		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTL702	2	Environmental and Social System Science Course	2nd Semester	Tue./I	Japanese /English
[Outline and purpose]					
<p>Students will learn about the planning and design of safe, comfortable and sustainable cities and regions in harmony with the environment through actual cases, and further practice planning and design for a certain area to deepen understanding.</p> <p>For urban and regional planning and design, it is necessary not only to improve economic efficiency, functionality and superficial design, but also to comprehensively consider the environment, life, historical culture, sustainability, etc. The goal of this lecture is to imagine the lives of the people who live there, understand the environment of the place, present the ideal state of the city, think about measures for its realization, and further, the administration, citizens, and to train human resources who can make decisions from either position by simulating the thinking of each position, such as designers (or planners) and community development NPOs, and so on.</p>					
[Objectives]					
Acquire skills related to planning and design of cities and regions					
[Requirements]					
Basic knowledge of undergraduate level city planning, landscape engineering, and transportation planning					
[Evaluation]					
[Textbooks]					
[References]					
[Schedule]					

Basics of urban design: This year's theme is "citizen collaboration town development"

1-2. Understanding of urban design cases and understanding of the social situation surrounding the enforcement of the Landscape Act and the revision of the City Planning Act

3-4. Literature review, report writing, and discussion on urban design cases in collaboration with residents

Practice of urban design: This year's theme is "transportation town development". Presentations and discussions will be held each time.

Practice of urban design: Theme of the study, "Transport-based City Planning"

5. History and Present Situation of Public Transportation

6. City Planning with Public Transportation

7. What is Maas(Mobility as a Service)?

8. City Planning considering Maas

9. Thinking of Shape of a City based on Mobility

Urban design technology: This year's theme is "technology for solving urban problems." Presentations and discussions will be held each time.

Ten. Basic knowledge of public economics

11. Theory and practice of cost-benefit analysis

12. Theory and practice of urban economics

13. Theory and practice of urban transportation

14. Various systems of city planning

15. Consideration and presentation / discussion of specific urban problems

[Title]			[Instructor]		
Advanced Infrastructure Engineering			Junji Yoshida/Satoshi Goto		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTL703	2	Environmental and Social System Science Course	2nd Semester	Mon./II	Japanese
[Outline and purpose]					
<p>This course provides fundamentals knowledge on mechanics for designing and analyzing structures such as bridges and geotechnical structures.</p> <p>In the former part of the course, we study about the basic concepts of continuum mechanics and structural mechanics. Then, Energy methods for the structures are studied in order to derive boundary value problems of the problems.</p> <p>In the latter part of the course, mechanics of soil and its modeling are studied in detail, and we try to solve some exercises, which will be available for practical problems of those mechanics.</p>					
[Objectives]					
<ul style="list-style-type: none"> <li>- to understand the definition of stress and strain</li> <li>- to derive boundary value problems of the structure, based on the energy method.</li> <li>- to explain how to obtain dynamic properties of soil through experiments, and how to approximate the experimental results by models.</li> <li>- to understand liquefaction from experimental and analytical viewpoints.</li> </ul>					
[Requirements]					
Fundamental knowledge of structural mechanics and soil mechanics.					
[Evaluation]					
<p>Report on the contents of the lesson: 50%</p> <p>Term examination : 50%</p>					
[Textbooks]					
ISHIHARA, K., Soil Behaviour in Earthquake Geotechnics, Clarendon Press, ISBN:978-0198562245

[Schedule]					
<ol style="list-style-type: none"> <li>1. Introduction (Assoc. Prof. Yoshida)</li> <li>2. Concept of Continuum (Assoc. Prof. Yoshida)</li> <li>3. Stress and equilibrium equations (Assoc. Prof. Yoshida)</li> <li>4. Strain and deformation (Assoc. Prof. Yoshida)</li> <li>5. Linear elastic solids (Assoc. Prof. Yoshida)</li> <li>6. Variational principle (Assoc. Prof. Yoshida)</li> <li>7. Energy method for continuum and structural mechanics (Assoc. Prof. Yoshida)</li> <li>8. Outline of dynamic properties of soils</li> <li>9. Experimental approach for dynamics of soils (Assoc. Prof. Goto)</li> <li>10. Experimental approach for dynamics of soils (Assoc. Prof. Goto)</li> <li>11. Theory for dynamics of soils (Assoc. Prof. Goto)</li> <li>12. Theory for dynamics of soils (Assoc. Prof. Goto)</li> <li>13. Experiments for liquefaction (Assoc. Prof. Goto)</li> <li>14. Modeling for liquefaction (Assoc. Prof. Goto)</li> <li>15. Summary (Assoc. Prof. Yoshida, Assoc. Prof. Goto)</li> </ol>					

[Title]			[Instructor]		
Advanced Environmental Sanitary Engineering			Hidehiro Kaneko / Kazuhiro Mori / Sakiko Yaegashi		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTL704	2	Environmental and Social System Science Course	1st Semester	Thu./I	English/Japanese
[Outline and purpose]					
This class is consist of two parts. The first part deals with basics of water quality management and second part is on basics of waste management and establishment of recycling-based society. Exercise and discussion will be performed to bring up application skill.					
[Objectives]					
1. To understand basic concept, technique and acquire skills to propose a solution on water quality management. 2. To understand basic concepts, general technique and to acquire a capability of dealing with a problem relating to waste management system 3. To understand basic concept, technique and skills to propose a solution on river ecosystem conservation.					
[Requirements]					
[Evaluation]					
1. Reports and/or short examination; Understanding level of the contents in each part will be evaluated.; 100%					
[Textbooks]					
[References]					
[Schedule]					
Part I: Water quality management (Mori) 1. Basics of environmental conservation, Water quality indexes 2. Basics of water purification technique 3. Biological treatment 4. Physicochemical treatment 5. Present issues and future prospect  Part II: Waste management (Kaneko) 6. History of waste management and issues waiting solution 7. Establishment of recycling-based society and relating and legislative system 8. Waste management technique (1) Incineration, Gasification and melting 9. Waste management technique (2) Intermediate treatment 10. Waste management technique (3) Final disposal  Part III: River ecosystem conservation (Yaegashi) 11. River ecosystem structure 12. The current situation of river management and ecosystem conservation 13. River ecosystem management technique (1): 14. River ecosystem management technique (2): 15. Present issues and future prospect					

[Title]			[Instructor]		
Infrastructure Maintenance Management			Shigehiko Saito / Shinichi Muto		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTL705	2	Environmental and Social System Science Course	2nd Semester	Fri./I	Japanese English
[Outline and purpose]					
We will study the concept of maintenance system for structures consisting social infrastructure stocks to develop sustainable social infrastructure. This course provides system and method of asset management including predicting life-cycle costs, its minimization, and financial measures. We will perform stock management simulation of social infrastructures for a virtual local government.					
[Objectives]					
<ul style="list-style-type: none"> <li>- to explain effective maintenance system for social infrastructures</li> <li>- to explain stock management of social infrastructures</li> </ul>					
[Requirements]					
1. a fundamental knowledge for design and construction of infrastructures. 2. a fundamental knowledge for urban planning and statistics.					
[Evaluation]					
Report on infrastructure management: 80% Discussion on the course contents: 20%					
[Textbooks]					
[References]					
[Schedule]					
I. maintenance of infrastructures (Prof. Saito) <ol style="list-style-type: none"> <li>1. basic concept of maintenance of infrastructures</li> <li>2. conducting maintenance plans</li> <li>3. investigations of infrastructures</li> <li>4. assessment of infrastructures</li> <li>5. effective remedial measures of infrastructures</li> <li>6. recording of maintenance works</li> <li>7. developing reasonable maintenance system</li> </ol> II. stock management of infrastructures (Assoc. Prof. Muto) <ol style="list-style-type: none"> <li>8. basic concept of management of infrastructure</li> <li>9. economic impact of management of infrastructure</li> <li>10. estimating life cycle cost of infrastructure</li> <li>11. minimizing life cycle costs of infrastructure</li> <li>12. methods of management of infrastructure</li> <li>13. efficient method of management of infrastructure</li> <li>14. proposing effective management of infrastructure</li> <li>15. comprehensive evaluation</li> </ol>					

[Title]			[Instructor]		
Advanced Water Quality Assessment			Eiji Haramoto / Kei Nishida / Takashi Nakamura / Masaya Yasuhara / Nobuhito Ohte		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTM702	2	Environmental and Social System Science Course	2nd Semester	Fri./II	English/Japanese
[Outline and purpose]					
Environmental issues and the applied methodologies are outlined specifically on terrestrial environments such as groundwater, river or lake. Natural and human-induced water contents, estimations of pollutant load and health risk/guideline, modeling water quality incorporated with infiltration/flow/runoff processes are discussed. English is potentially used.					
[Objectives]					
<ul style="list-style-type: none"> <li>- Understanding basic concept of water quality control and calculation of guideline values</li> <li>- Understanding basic concept of water quality modelling and capable of introducing the equations</li> </ul>					
[Requirements]					
Basics of water quality is desirable.					
[Evaluation]					
Quiz and assignments: 70% Attitude in the class: 30%					
[Textbooks]					
Not designated. Related literatures or research examples will be introduced when necessary.					
[References]					
Not designated. Related literatures or research examples will be introduced when necessary.					
[Schedule]					
1 Introduction (Nishida, Haramoto, and Nakamura) 2 Outline of health-related items (Haramoto) 3 Outline and future of microbiological indicators (Haramoto) 4 Methods for microbial risk assessment (Haramoto) 5 Outline and future of living environmental items (Nishida) 6 Basics of health risk calculation (Nishida) 7 Basics of loading calculation (Nishida) 8 Basics of isotopic fractionation calculation (Ohte) 9 Examples of isotopic fractionation calculation (Ohte) 10 Outline of Environmental isotopes (Nakamura) 11 Environmental assessments by isoscape (Nakamura) 12 Examples and future of isotope monitoring (Yasuhara) 13 Future of isotope monitoring (Yasuhara) 14 Group discussion (Nishida, Haramoto, and Nakamura) 15 Presentation (Nishida, Haramoto, and Nakamura)					

[Title]			[Instructor]		
Advanced Hydrology and Water Resources			Hiroshi Ishidaira / Kazuyoshi Souma / Keiichi Masutani		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTM703	2	Environmental and Social System Science Course	1st Semester	Thu./II	English/ Japanese
[Outline and purpose]					
The aim of the lecture is to learn the elements of hydrology and water resources to understand the water cycle and river basin environments. The lecture starts by describing basic equations of fluid motion and water dynamics modeling through lectures and exercises. The lecture deals with not only the natural water cycle but also artificial control including reservoirs and irrigations. The lecture also deals with the current problems and prospects of water resources, including water environments and water usage. The lecture is mainly given in English.					
[Objectives]					
1. To understand basic equations of fluid motion and their derivation. 2. To understand elements of water dynamics model 3. To understand the current problems and prospects of water resources, including water environments and water usage.					
[Requirements]					
Basic knowledge on hydraulics, hydrology and calculus.					
[Evaluation]					
Report: 40% Final exam: 40% Attendance and Attitude: 20%					
[Textbooks]					
[References]					
[Schedule]					
1. Introduction 2. Basic theory (physics) of material transport 3. Basic theory (physics) of water flow 4. Routing of channel flow 5. Evapotranspiration: Estimation methods 6. Evapotranspiration: Observation methods 7. Vertical movement of soil water 8. Ground water flow 9. Exercises about evapotranspiration and soil water movement 10. River basin hydrological model: conceptual model and lumped model 11. River basin hydrological model: distributed model 12. Modeling of water use and water control 13. Water resources in Japan 14. Water resources in the world 15. Summary					

[Title]			[Instructor]		
Advanced Environmental Treatment Technology			Tadashi Toyama / Tatsuru Kamei		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTM704	2	Environmental and Social System Science Course	2nd Semester	Thu./II	English/Japanese
[Outline and purpose]					
The purpose of this lecture is to learn the purification/remediation technologies for polluted soil and water. They include physicochemical technology, biological technology, and ecological technology for removal of organic compounds, nutrients (nitrogen and phosphorus), microplastic, and persistent organic pollutants. In this lecture, we will learn the technologies for energy/material recovery from solid waste/wastewater.					
[Objectives]					
<ol style="list-style-type: none"> <li>1. To understand the history, background, and current situation of environmental pollution.</li> <li>2. To understand the purification technology for organic pollution.</li> <li>3. To understand the purification technology for nutrients (nitrogen and phosphorus) pollution.</li> <li>4. To understand the current situation of microplastic pollution and countermeasure.</li> <li>5. To understand the purification technology for persistent organic pollutants.</li> <li>6. To understand the technology for energy/material recovery from wastes.</li> <li>7. To understand the decentralized water/wastewater technology.</li> <li>8. To understand the methodology for SDGs achievement using environmental technology.</li> </ol>					
[Requirements]					
It is desirable that you should have basic knowledge of chemistry, biology and environmental engineering.					
[Evaluation]					
<ol style="list-style-type: none"> <li>1. Reports and/or short examination; evaluation point is theoretical consideration of environmental technology; 70%</li> <li>2. Lecture attendance; evaluation point is active participation/attitude; 30%</li> </ol>

[Title]			[Instructor]		
Advanced River Basin Management			Shinichi Muto /Yutaka Ichikawa / Kazuyoshi Souma		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTM705	2	Environmental and Social System Science Course	2nd Semester	Tue./II	English/ Japanese
[Outline and purpose]					
In this lecture, students will learn the integrated river basin management and regional planning to solve the local water issues. This lecture deals with the management of floods / sediments within basin, water hazard risk estimation for disaster reduction, and environmental assessment / cost-benefit analysis for river basin environment and water resources. The lecture is mainly given in English.					
[Objectives]					
-To understand how to manage water quantity, quality, and environment within river basin. -To understand how to evaluate water hazard risk -To understand how to carry out cost-benefit analysis for river basin management					
[Requirements]					
Basic knowledge of environmental sciences (Hydrologic cycle, Hydrospheric Science), or engineering (Hydrology, Water Resources Engineering, River Engineering, Infrastructure Planning and Management).					
[Evaluation]					
Report: 70% Attendance and Attitude: 30%					
[Textbooks]					
[References]					
[Schedule]					
1. Introduction 2. Concept of river basin management in Japan 3. Examples of river basin management in Japan 4. The way to make river management plan in Japan 5. Discussion for making river management plan: setting of objectives 6. Discussion for making river management plan: planning strategy 7. Sustainable river basin management to achieve SDGs 8. Flooding simulation for water hazard risk estimation: basic equations 9. Flooding simulation for water hazard risk estimation: numerical solutions 10. Flooding simulation for water hazard risk estimation: practices 11. Applications of water hazard risk estimation 12. Cost-benefit analysis for river basin management 13. Cost-benefit analysis based on economic equilibrium models 14. Practice of cost-benefit analysis for river basin management 15. Presentations of cost-benefit analysis for river basin management

Advanced Environmental Data Analysis			Eiji Haramoto / Kei Nishida / Takashi Nakamura / Tadashi Toyama / Tatsuru Kamei		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTM706	2	Environmental and Social System Science Course	1st Semester	Fri./I	English/Japanese
[Outline and purpose]					
The purpose of this class is to understand the basics of environmental statistics which is essential in environmental science researches. This class contains a variety of topics, such as basic statistics, probability distribution, analysis of variance, regression analysis, and multivariate analysis. Japanese and overseas students study together through group work. English is potentially used.					
[Objectives]					
- To be able to explain theoretically about the results of statistical analysis for environmental datasets using appropriate statistical method(s).					
[Requirements]					
Basic knowledge on statistics and water quality is desirable.					
[Evaluation]					
Quiz and assignments: 50% Attitude in the class: 25% Presentation and discussion: 25%

Advanced Research Exercises for River Basin Environmental SDGs			Supervisors		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTM708	1	Environmental and Social System Science Course	Intensive	/	English/ Japanese
[Outline and purpose]					
The goal is to acquire the skills and know-how necessary to carry out research through the formulation of research plans, preparation of basic documents such as proposals and research progress reports, and discussions with a group of academic advisors. The program also aims to help students acquire high communication skills through joint presentations, discussions, and group work with the entire student body of the interdisciplinary program.					
[Objectives]					
1) Briefly can be explain about the own research 2) To be able to get to the point and communicate concisely 3) Ability to structure documents and give oral explanations in a logical manner					
[Requirements]					
Review and discussion of relevant academic papers and social conditions parties					
[Evaluation]					
Report 50%: Logic of description and explanation Attitude 20%: Proactivity in speaking and facilitating Presentation 30%: Concise raws of presentation

Advanced Internship for River Basin Environmental SDGs			Supervisors		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTM709	1	Environmental and Social System Science Course	Intensive	/	English/ Japanese
[Outline and purpose]					
Internships and fieldwork will be conducted in the target regions of Asia and Africa, with the goal of acquiring knowledge, skills, and training management (planning and negotiation) abilities that will contribute to solving problems occurring in the field. The program also aims to provide students with the practical experience necessary to become internationally active public servants and professionals.					
[Objectives]					
<ul style="list-style-type: none"> <li>• To be able to develop their own specialized research from the perspective of the SDGs as well through off-campus training.</li> <li>• To be able to express ideas about the connection between research and society.</li> <li>• To be able to think inclusively in consideration of international social conditions.</li> </ul>					
[Requirements]					
<ul style="list-style-type: none"> <li>• Secure training and fieldwork hosts</li> <li>• Drafting a plan and coordinating with the supervisors</li> </ul>					
[Evaluation]					
Report 50%: Mission accomplishment Presentation 50%: Mission accomplishment

Advanced Environmental and Mathematical Sciences			Kazuho Ito		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTN702	2	Environmental and Social System Science Course	1st Semester	Thu./II	Japanese
[Outline and purpose]					
Some system like the nature or the human societies behaves as a dynamic system. By extracting characteristic features of the systems, environmental modeling and programing are carried out. Computer simulations are employed to predict and evaluate the systems which change as time elapses.					
[Objectives]					
To be able to describe some natural phenomena as mathematical models by partial differential equations. To be able to construct numerical schemes for solving model equations, and to implement them as computer programs.					
[Requirements]					
Some knowledge of calculus, linear algebra and differential equations are assumed.					
[Evaluation]					
Project related to modeling and numerical simulation.					
[Textbooks]					
[References]					
[Schedule]					
1—5. Mathematical modeling for some natural phenomena with partial differential equations.					
6—10. Difference and spectral method for discretizing partial differential equations.					
11—15. Matlab programing for solving model equations.

Advanced Social Modeling and Simulation			Yoichi Shimazaki /Hiroshi Hirai		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTN705	2	Environmental and Social System Science Course	2nd Semester	The./V	Japanese
[Outline and purpose]					
Students learn data analysis and simulation techniques in our class. These simulation results are very useful for suggesting new roles of the environmental and social system.					
[Objectives]					
To apply spatial analysis with geographical information system. To apply energy data analysis and simulation.					
[Requirements]					
Basic skills of computing.					
[Evaluation]					
Report: 100%					
[Textbooks]					
None					
[References]					
None					
[Schedule]					
1. Introduction 2-8. Spatial analysis with geographical information system 9-15. Energy data analysis and simulation					

[Title]			[Instructor]		
Environmental and Symbiotic Biology			Noboru Muramatu / Takao Miki		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTN706	2	Environmental and Social System Science Course	2nd Semester	Mon./V	Japanese
[Outline and purpose]					
The creature adapts to environment, and they have the mechanism that can adapt to an environmental change. We learn about the local weather and the mechanism for the molecular changes in the association with the plant or the microorganism and understand the survival strategy of the creature.					
[Objectives]					
To enable a learner to reach understand about a creature and symbiosis of nature from a macro and micro-viewpoint.					
[Requirements]					
Rudimentary knowledge of plant and microorganism are required.					
[Evaluation]					
Do a report on a creature and symbiosis.					
[Textbooks]

Advanced Biology and Ecology			Junichi Miyazaki / Tomoya Iwata / Yukihiko Serisawa		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTN707	2	Environmental and Social System Science Course	2nd Semester	Wed. / V	Japanese
[Outline and purpose]					
This class provides information of modern biology and ecology to learn and to discuss the interaction between living organisms and their environment. The aim is to conserve endangered organisms and biodiversity and improvement of habitat environments and also to understand the behavior of human being and their society.					
[Objectives]					
1) To understand concept, theory, and mechanism of organisms and ecosystem 2) To understand how to study modern Biology/Ecology 3) To have a point of view from those disciplines on various scientific phenomena.					
[Requirements]					
Knowledge of basic biology and environment					
[Evaluation]					
Examination 50% Report 50%					
[Textbooks]					
Handouts					
[References]					
[Schedule]					
1. Guidance 2~8. What is Living Organism and Ecosystem 9~15. Interaction between Organisms and Environment					

[Title]			[Instructor]		
Advanced Environmental Governance			Mikihiko Watanabe / Kiseong Kim		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTN708	2	Environmental and Social System Science Course	2nd Semester	Thu./I	Japanese
[Outline and purpose]					
The objective of this course is to provide the students with a basic knowledge of “environmental governance” by which they can contribute to a realization of the sustainable society. The students are, through this knowledge, expected to obtain trends of international environmental treaties and the situations of sustainable society. They are required to refer to selected references and to submit report(s) on these. Discussions with a lecturer are required as well.					
[Objectives]					
1. To understand the main topics of environmental governance. 2. To be able to apply the theories of environmental governance to actual existing environmental problems.					
[Requirements]					
Basic knowledge of environmental politics and environmental economics.					
[Evaluation]					
Attendance 50% Final paper 50%					
[Textbooks]					
John Dryzek, <i>The Politics of the Earth</i> , Oxford: Oxford University Press, 2005. Official Website of the United Nations Framework Convention on Climate Change <a href="https://www.unfccc.int/2860.php">https://www.unfccc.int/2860.php</a> Official Website of the Convention on Biological Diversity <a href="https://www.cbd.int/">https://www.cbd.int/</a>					
[References]					
Students will be given a reading list in the beginning of the course.					
[Schedule]					
1. Introduction (Kim) 2. Sustainable development (Kim) 3. Ecological modernization (Kim) 4. Administrative rationalism (Kim) 5. Democratic pragmatism (Kim) 6. Economic rationalism (Kim) 7. Environmental policy integration (Kim) 8. Sustainable development strategy (Kim) 9. Environmental governance and the significance of the Convention on Biological Diversity (CBD) (Watanabe) 10. Ecosystem services, environmental values, and sustainability (Watanabe) 11. Access and Benefit-sharing (ABS) and the governance (Watanabe) 12. Traditional Knowledge (TK) and the governance (Watanabe) 13. The Nagoya Protocol and beyond (Watanabe) 14. Case 1: Inappropriate use of genetic resources (Watanabe) 15. Case 2: Traditional knowledge (Watanabe)

Advanced Bioresources			Yasuhiro Tanaka / Ryota Kataoka		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTN710	2	Environmental and Social System Science Course	1st Semester	Wed. I	Japanese
[Outline and purpose]					
The purpose of this lecture is to learn the basic knowledges for bioresources such as animal, plant, and microorganism. The techniques for analyzing and utilizing the bioresources will also be lectured.					
[Objectives]					
1. To understand the biological classification 2. To understand the techniques for analyzing bioresources in various environments 3. To understand the techniques for utilizing bioresources in various environments					
[Requirements]					
It is desirable that you should have basic knowledge of chemistry, biology, soil science, and microbiology.					
[Evaluation]					
1. Reports and/or short examination: 70% 2. Lecture attendance: 30% (evaluation point is active participation/attitude)					
[Textbooks]					
[References]					
[Schedule]					
1. Guidance for this lecture (Tanaka and Kataoka) 2. Biological classification 1 (Tanaka) 3. Biological classification 2 (Kataoka) 4. Outline of biological resources in soil environments (Kataoka) 5. Techniques for analyzing biological resources in soil environments 1 (Kataoka) 6. Techniques for analyzing biological resources in soil environments 2 (Kataoka) 7. Techniques for utilizing biological resources in soil environments 1 (Kataoka) 8. Techniques for utilizing biological resources in soil environments 2 (Kataoka) 9. Outline of biological resources in water environments (Tanaka) 10. Techniques for analyzing biological resources in water environments (Tanaka) 11. Techniques for utilizing biological resources in water environments (Tanaka) 12. Outline of biological resources in extreme environments (Tanaka) 13. Techniques for analyzing biological resources in extreme environments (Tanaka) 14. Techniques for utilizing biological resources in extreme environments (Tanaka) 15. Summary of this lecture (Tanaka and Kataoka)

Interdisciplinary Physics			Hiroyuki Shima		
[Code]	[Credits]	[Program]	[Semester]	[Hours]	[Language of instruction]
PTN711	2	Environmental and Social System Science Course	1st Semester	Fri./IV	Japanese
[Outline and purpose]					
To acquire an interdisciplinary perspective that spans chemistry, biology, earth science, and astronomy, with a focus on physics-based thinking.					
[Objectives]					
To become able to explain the close relationship between the fields of physics and non-physics (especially evolutionary biology), to describe mathematical formulas that represent the basic laws of physics, and to explain their physical meaning.					
[Requirements]					
Basic knowledge equivalent to undergraduate students in physics, chemistry, and biology.					
[Evaluation]					
With several mini-exams and reports.					
[Textbooks]					
n/a					
[References]					
n/a					
[Schedule]					
1. Introduction to the entire lecture  2. Crowd behavior of living things keywords: active matter, allometry  3. Insects' internal mechanism keywords: light diffraction, aerodynamics, structural strength, thermal inertia  4. Building the bodies of aquatic and terrestrial animals keywords: gravity, gait, water resistance, Darwinian evolution  5. Cellular and microbial physics keywords: amphipathic molecules, viscosity, fluid dynamics, energy generation  6. Organisms living in extreme environments keywords: thermophiles, environmental radiation, osmotic pressure, water activity  7. DNA and RNA physics					

keywords: hydrogen bonds, folding structures of protein molecules, topology

8. Cell energy collection function

keywords: electron transport chain, methanogen, habitable zone

9. Water physics

keywords: ice planet, water physiology, hydrolysis

10. Atoms that control life

keywords: electron orbit, Pauli exclusion principle, interstellar medium, sea of ammonia

11. Integration of physics and biology 1

keywords: universal biology, astrobiology

12. Integration of physics and biology 2

keywords: quantum theory, uncertainty, reductionism

13. Space Development Science and Technology 1

keywords: space elevator, exoplanet exploration

14. Space Development Science and Technology 2

keywords: space debris, lunar resources, water on Mars

15. Overall summary
