| Intensive lecture form The actual form shall be any of the following related to the teacher in charge. 1) Collaborative research conducted at the Graduate School General Research Division and outside organization 2) Research and development in collaboration with other organizations outside the university We aim to participate in exercises for 60 hours and be able to exceed the grade level. At the end we hold a recital and the students announce the results. The instructor in charge will evaluate the grade based on the contents of the presentation. | | | | | | | |
| | | | | | | | |

| [Outline an | d purpose] | | | | | | |
| [Outline and purpose] Students will learn about the planning and design of safe, comfortable and sustainable cities and regions in harmony with the environment through actual cases, and further practice planning and design for a certain area to deepen understanding. For urban and regional planning and design, it is necessary not only to improve economic efficiency, functionality and superficial design, but also to comprehensively consider the environment, life, historical culture, sustainability, etc. The goal of this lecture is to imagine the lives of the people who live there, understand the environment of the place, present the ideal state of the city, think about measures for its realization, and further, the administration, citizens, and to train human resources who can make decisions from either position by simulating the thinking of each position, such as designers (or planners) and community development NPOs, and so on. [Objectives] Acquire skills related to planning and design of cities and regions | | | | | | | |

Basics of urban design: This year's theme is "citizen collaboration town development" 1-2. Understanding of urban design cases and understanding of the social situation surrounding the enforcement of the Landscape Act and the revision of the City Planning Act 3-4. Literature review, report writing, and discussion on urban design cases in collaboration with residents

Practice of urban design: This year's theme is "transportation town development". Presentations and discussions will be held each time.

Practice of urban design: Theme of the study, "Transport-based City Planning"

- 5. History and Present Situation of Public Transportation
- 6. City Planning with Public Transportation
- 7. What is Maas(Mobility as a Service)?
- 8. City Planning considering Maas
- 9. Thinking of Shape of a City based on Mobility

Urban design technology: This year's theme is "technology for solving urban problems." Presentations and discussions will be held each time.

Ten. Basic knowledge of public economics

- 11. Theory and practice of cost-benefit analysis
- 12. Theory and practice of urban economics
- 13. Theory and practice of urban transportation
- 14. Various systems of city planning

15. Consideration and presentation / discussion of specific urban problems

| [Outline and purpose] This course provides fundamentals knowledge on mechanics for designing and analyzing structures such as bridges and geotechnical structures. In the former part of the course, we study about the basic concepts of continuum mechanics and structural mechanics. Then, Energy methods for the structures are studied in order to derive boundary value problems of the problems. In the latter part of the course, mechanics of soil and its modeling are studied in detail, and we try to solve some exercises, which will be available for practical problems of those mechanics. [Objectives] • to understand the definition of stress and strain • to explain how to obtain dynamic properties of soil through experiments, and how to approximate the experimental results by models. • to understand liquefaction from experimental and analytical viewpoints. [Requirements] Fundamental knowledge of structural mechanics and soil mechanics. | | | | | |

| The aim of and river h dynamics n also artifici prospects o English. | The aim of the lecture is to learn the elements of hydrology and water resources to understand the water cycle and river basin environments. The lecture starts by describing basic equations of fluid motion and water dynamics modeling through lectures and exercises. The lecture deals with not only the natural water cycle but also artificial control including reservoirs and irrigations. The lecture also deals with the current problems and prospects of water resources, including water environments and water usage. The lecture is mainly given in English | | | | | | | |

| [Outline and purpose] The purpose of this class is to understand the basics of environmental statistics which is essential in environmental science researches. This class contains a variety of topics, such as basic statistics, probability distribution, analysis of variance, regression analysis, and multivariate analysis. Japanese and oversea students study together through group work. English is potentially used. [Objectives] - To be able to explain theoretically about the results of statistical analysis for environmental datasets using appropriate statistical method(s). | | | | | |

| [Outline and purpose] Internships and fieldwork will be conducted in the target regions of Asia and Africa, with the goal of acquiring knowledge, skills, and training management (planning and negotiation) abilities that will contribute to solving problems occurring in the field. The program also aims to provide students with the practical experience necessary to become internationally active public servants and professionals. [Objectives] • To be able to develop their own specialized research from the perspective of the SDGs as well through off-campus training. • To be able to express ideas about the connection between research and society. • To be able to think inclusively in consideration of international social conditions. [Requirements] • Secure training and fieldwork hosts | | | | | |

| [Outline an | d purpose] | | | | |
| The objective of this course is to provide the students with a basic knowledge of "environmental governance" by which they can contribute to a realization of the sustainable society. The students are, through this knowledge, expected to obtain trends of international environmental treaties and the situations of sustainable society. They are required to refer to selected references and to submit report(s) on these. Discussions with a lecturer are required as well. | | | | | |
| 1. To under | stand the n | nain topics of environmental governance. | | | |

| PTN710 | 2 | Environmental and Social System Science Course | 1st Semester | Wed. I | Japanese | |
| [Outline and purpose] The purpose of this lecture is to learn the basic knowledges for bioresources such as animal, plant, and microorganism. The techniques for analyzing and utilizing the bioresources will also be lectured. | | | | | | |
| [Objectives 1. To unde 2. To unde 3. To unde [Requirement It is desiral | [Objectives] 1. To understand the biological classification 2. To understand the techniques for analyzing bioresources in various environments 3. To understand the techniques for utilizing bioresources in various environments [Requirements] It is desirable that you should have basic knowledge of chemistry, biology, soil science, and microbiology. | | | | | |
| [Evaluation] 1. Reports and/or short examination: 70% 2. Lecture attendance: 30% (evaluation point is active participation/attitude) [Textbooks] | | | | | | |
